

J-DRAIN WALL & JACKOBOARD®

Achieving an almost invisible drain solution for walk-in showers

Our prize-winning design **J-DRAIN Wall** in conjunction with **JACKOBOARD Wall Drain Shower Bases** delivers a truly minimalist and exclusive walk-in shower solution!

The brushed stainless steel drain cover sits vertically on the end wall of the shower and is available in a choice of three different styles - flat, curved or tileable.

The drain body and outlet connections are cleverly concealed behind a 'false wall' - and so never before has a shower drain been so subtle or unintrusive!

Choice of connection positions

The **J-DRAIN Wall** is easily connected to the drainage system via a front, left or right outlet position.

The unused outlets are then simply covered with the blanking plugs and screws provided. This versatile system makes for fast and easy installation.

And **J-DRAIN Wall** delivers an impressive drainage capacity of 30 litres/minute.

Height and depth adjustable

The adjustable 'legs' of the **J-DRAIN Wall** allow for easy positioning of the overall installation height from 80 to 215mm up to the top edge of the floor tile.

In a similar way, the depth-adjustable 'arms' of the **J-DRAIN Wall** allow for positioning of the drain body away from the original wall from 136 to 195mm.

This allows for the critical installation of a 'false wall' which neatly conceals the drain body and the drainage pipe connection.

Engineered to perfection

The **J-DRAIN Wall** is manufactured in dirt-resistant and anti-microbial ABS plastic. The grate cover, trap and siphon are easily removed for cleaning and maintenance, with a water trap height of 22mm.

Critically, the **J-DRAIN Wall** incorporates a pre-bonded waterproof membrane surrounding the grate cover area which delivers a totally reliable waterproof seal over the surrounding area.

The grate cover itself can be easily adjusted for height and depth to achieve a snug and pleasing fit against the floor and wall tiling.

Choice of drain covers

J-DRAIN Wall brushed stainless steel grate covers are available in range of styles.

Flat finished covers accommodate tile thicknesses of 10mm and up to 17mm, while curved and tileable versions take tiles up to 10mm thick. The tileable version delivers an almost invisible integration into the shower concept.

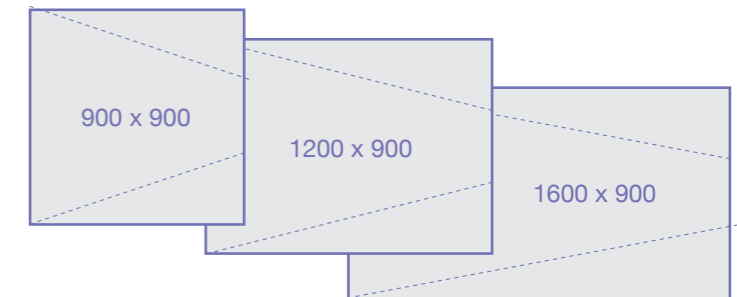

JACKOBOARD Wall Drain Shower Bases

Our **J-DRAIN Wall** is designed to work exclusively with unique **JACKOBOARD Wall Drain Shower Bases**.

These totally waterproof tileable shower bases feature twin falls which run from the drain grate width to the corners of the bases.

Bases are available in three popular configurations:

- 900 x 900mm with a fall from 7mm to 20mm
- 1200 x 900mm with a fall from 30mm to 7mm
- 1600 x 900mm with a fall from 30mm to 7mm

Simple installation

Once the **J-DRAIN Wall** is installed within the 'false wall' (comprehensive installation instructions are available from Jackson UK Ltd) a **JACKOBOARD Wall Drain Shower Base** of the required dimension is offered up against the drain unit.

If necessary, the bases can be easily trimmed to match the required project size.

The waterproof membrane attached to the drain is then adhesive bonded to the shower base and surrounding wall, and all other joints sealed using the **JACKOBOARD SealingKit**.

It's important to note that no further membranes or coatings are required to achieve a totally waterproof substrate for tiling.

The base and walls are then tiled, making sure that the valleys of the falls on the base are matched by the tile cuts.

A contemporary and design-led solution

Whether you are a bathroom designer or home-improver, the unique combination of **J-DRAIN Wall** and **JACKOBOARD Wall Drain Shower Bases** delivers an elegant, unobtrusive and thoroughly modern solution to achieving the ultimate walk-in shower or wetroom experience.
